

Free travel in low emission zones with HJS diesel particulate filters

HJS CRT for
Trucks and LDV

Environment protection pays for itself!

Traffic bans in July 2020!

Low emission zones in Denmark

■ If you are the owner of a commercial truck or bus older than 11 years (EURO III and IV) please be aware that from the 1st of July, 2020 you are no longer allowed to operate your vehicle within the Milieu-zones of Copenhagen, Frederiksberg, Aarhus, Odense and Aalborg.

■ Fortunately, the new regulation includes the opportunity to upgrade your vehicles to an equivalent standard of Euro VI with a very efficient HJS diesel particle filter.

■ Younger Euro V vehicles will be affected only two years later from the 1st July, 2022. Therefore, HJS will offer introductory prices and special rates for system installations if you upgrade these vehicles also right now. Please inform yourself about the huge benefits of HJS diesel particle filter out of sintered metal with minimum costs for service and maintenance.

Sustainably clean over a lifetime

■ HJS systems bring existing vehicles to state-of-the-art emission level. For subsequent reduction of emissions of pollutants from internal combustion engines, we develop and market products for retrofit. We operate all types of vehicles from cars/small trucks/mobile homes, through commercial vehicles/public transport and extending to construction machines.

■ Our products are based on long-standing, wide-ranging experience gained from co-operation with all European engine and vehicle manufacturers of repute. An extensive modular component system enables system application with low technical and time outlay. Our extensive product portfolio meets the highest quality-control requirements and thus contributes to sustainability in the vehicle inventory.

Solutions from HJS

Examples for upgradeable trucks

- Scania
- Volvo
- Mercedes
- MAN
- DAF
- Iveco
- Renault

EURO III and EURO IV to EURO VI

CRT® SMF®
TGA 96-A / K

VOLVO
SMF®-System:
CRT® SMF® 102

SCANIA
SMF®-System:
SMF® 101

Mercedes ACTROS
SMF® System:
CRT® SMF®
TGA 96-A / K

SMF® Universal System

Sintered metal filters (SMF®)

■ The centrepiece of all HJS exhaust treatment systems is the sintered metal filter (SMF®). This closed filter for trucks reduces the emissions of soot particles, including ultra-fine particulate matter, by almost 100 per cent.

■ HJS's product portfolio for the truck segment includes diesel particulate filters for everything from light- to heavy-duty trucks. Irrespective of whether you're active in the long-haul or short-haul forwarding business or operate public service or refuse collection vehicles, HJS has the right system for your needs.

■ The SMF® modules are integrated in a stainless-steel housing with the same dimensions as the original silencer. This means that it can easily be fitted into the existing exhaust system of almost any Type-IDE of truck without the need to modify connections.
